HTA Soil Wetter

Is a unique biodegradable soil wetting agent which contains organic elements to stimulate microbiology while enhancing soil water penetration and retention in non-wetting soils.

Benefits

- ✓ It is effective in the lowering surface tension of water, which increases soil water permeability
- ✓ HTA Soil wetter is formulated with additives that improve the wetting and absorption of water
- ✓ Plant nutrient availability increases through the enhanced wetting and solubilization action of the wetter.
- ✓ Acts as stimulant for fungi and micro-organisms, in the soil.

Typical Analysis

	G/L	% W/V	%W/W
Anionic Surface-Active Agent	260	26.00	25
pH	8.3 – 9.2		
SG	0.98 – 1.09		
Stability	Do not exceed temperatures > 40°C, store in a cool dry place Stable at temperatures below -2°C, will go easily into solution when agitated		

Application Rates

Application Rates All Crops	
Soil	2 – 10 Lt/Ha

Note: Agitate well before use.

Packaging: 20 Lt; 200Lt; 1000Lt and Bulk

Version Created: 31st August 2022
